The Assurant Way Challenge Purpose and Theme

- At Assurant, our culture is the secret of our success. We do things differently. We call it; The Assurant Way.
- One of the four dimensions of The Assurant Way is our Purpose; Helping people thrive in a connected world.
- This Purpose inspires us. It's the reason we exist as a company, and why the work we do each day matters to us and to the people we serve. Today, we want to invite you to take The Assurant Way Journey with us!

Challenge Statement and Mission

- The Connected World is the state of existence where everything is becoming increasingly digitized and globalized. This means workplaces, healthcare, transportation,
schools, personal devices, and home fixtures are increasing interconnected. As a result, the world is becoming rich with digital assets (e.g., data, APIs, statistics, imagery, etc.). We believe there is great opportunity to enrich the human experience based on interconnecting objects in the Connected World using logic and cool technology. We are challenging you to use your innovative spirit and your technological expertise to help integrate the human experience with the digital experience.
- Your mission is to help people thrive by making the Connected World easier to live in and more enjoyable to experience.
- We want you to build a sustainable solution that incorporates automated measures of reliability and reduction in operational waste to create an *efficient & scalable* tool.
- Without Security and Efficient Application Infrastructure, we are at risk of increasing the waste and consumption with our day-to-day tools.

Connected World and Digital Integration

Digitization and Globalization

The Connected World represents a state where digitization and globalization link everyday environments and devices seamlessly.

Interconnected Environments

Workplaces, healthcare, transportation, schools, and homes are increasingly interconnected through digital technologies.

Enriching Human Experience

Integrating digital assets and logic technology enhances quality of life and makes the Connected World enjoyable.

Innovation Challenge

The mission is to innovate and simplify living in the Connected World, helping people thrive through technology.

Social Good and Sustainability

© 2026 Assurant, Inc. All rights reserved. Company confidential.

Social Good

Definition of Social Good

Social good refers to activities and initiatives that benefit society at large and promote collective well-being.

Impact and Importance

Social good efforts improve quality of life by addressing issues impacting community, environment, any ecosystem, as well as many other aspects.

Sustainability and Reusability Through Technology

Promoting Sustainability

Focus on using technology to reduce waste and conserve resources for a sustainable future.

Encouraging Reusability

Technology solutions should emphasize reusability and minimize unnecessary consumption.

Passion-Driven Problem Solving

Participants are urged to identify problems they care about to create impactful tech solutions.

Economic and Environmental Impact

Technological innovations aim to support economic efficiency and environmental responsibility.

Hackathon Expectations and Rubric Guidelines

© 2026 Assurant, Inc. All rights reserved. Company confidential.

Problem Alignment and Personas

Aligning Problems to Personas

Ensure the problem addresses issues relevant to specific personas for targeted solutions (Check the Rubric for how many).

Example Personas

Common personas include students, faculty members, and newly graduated individuals facing distinct challenges.

Source Code Submission and GitHub

Source Code Submission

Participants must submit their source code through a GitHub repository URL as part of the submission process.

GitHub Usage Support

For those unfamiliar with GitHub, advisors are available via messaging platforms to provide assistance and guidance.

Demo and Team Structure

Demo Expectations

Communicate your **Minimum Viable Product (MVP)**, accomplishments running your code, challenges faced, and potential use of extra hours.

Team Composition

Teams should have a **maximum of four** members to ensure effective work distribution and reduce complexity.

Presentation Timing

Each presentation is limited to **five minutes** to provide equal time and allow for judge questions.

Tips and Additional Resources

© 2026 Assurant, Inc. All rights reserved. Company confidential.

Hackathon Tips

Innovate on Existing Ideas

Avoid reinventing the wheel (where necessary) by improving existing solutions with innovative features or cool additions.

Seek Expert Feedback

Reach out to advisors through messaging platforms between 9AM-5PM for valuable feedback before demos.

Focus on MVP

Begin by defining a Minimum Viable Product to ensure a clear and achievable project scope.

Understand Judging Criteria

Read the syllabus carefully to know what the judges are expecting and tailor your project accordingly.

Judging Rubric and Criteria

© 2026 Assurant, Inc. All rights reserved. Company confidential.

Hackathon Judging Rubric Table

Comprehensive Evaluation Categories

The rubric assesses Problem Selection, Planning, Development, and Presentation with weighted percentages for balanced evaluation.

Clear Scoring System

Scores range from 0 to 3, describing performance from no credit to above expectations with detailed criteria.

Focus on Originality and Teamwork

Rubric emphasizes innovation, impact, collaboration, and effective communication for successful projects.

Technical and Presentation Skills

Evaluation includes working software delivery and audience engagement to ensure well-rounded project assessment.

Category	No Credit (0 points)	Below Expectations (1 Points)	As Expected (2 Points)	Above Expectations (3 Points)
Problem Selection – 25% - How does it align to The Assurant Way Purpose? - Originality	No-show	Solution is for a single user; it is disconnected; or, brings little improvement to the user's problem. A common/very well-known problem with multiple well-developed solutions in the market.	Solution is for a limited population of users; it connects one to two aspects of a connected world; or, brings nominal improvement to the users' problem. A common problem with average impact that has only a few tech-solutions in the market.	Solution is for a large population of users; it connects three or more aspects of a connected world; or, brings great improvement to the users' problem. State of the art problem with a high impact that has few to no tech-solutions in the market. May include a very well-developed enhancement to a solution that already exists.
Planning – 15% - MVP Selection - Design Artifacts - Execution Strategy	No-show	Poorly defined MVP scope. Team created a single artifact, or no artifacts, to support their design and planning No work distribution across team members; big-bang merges/builds.	Well defined MVP scope for a single iteration. Team created up to 2 artifacts to support their design and planning Work distributed across team members in alignment with skillsets or learning intentions; small merges, iterative builds.	Well defined MVP scope with subsequent iterations defined. Team created 3 or more artifacts to support their design and planning Work distributed across team members in alignment with skillsets; or learning intentions; swarming of team members to solve problems; small merges, iterative builds, code stubs.
Development - 35% - Demo Working Software - Delivery of MVP	No-show	Software doesn't work; cannot be demoed. MVP not delivered.	Software works with some errors. MVP delivered.	Software works without errors. Additional scope beyond MVP delivered.
Presentation – 25% - Knowing your audience - Organization	No-show	Presentation is directed to a single persona. Presentation rambles without covering key points; no group dynamic during presentation. Presentation organization is minimal or missing. Key points are not covered within the 5-minute presentation window.	Presentation was inclusive of 2 personas. Presentation covers key points with minimal rambling; group dynamic is apparent during presentation. A large majority of the project is covered within the 5-minute presentation window.	Presentation was inclusive of 3 or more personas. Presentation clearly covers key points; without rambling; group dynamic is polished during presentation. Everything is covered within the 5-minute presentation window.
